

Factually Grounded Medical Report

Generated: 2026-06-11 17:11:47 | Zero-Hallucination System

Patient Information

Patient History:

Patient: 58-year-old male

Chief Complaint: Persistent cough and shortness of breath for 3 weeks

Medical History: Hypertension, ex-smoker (20 pack-years)

Medications: Amlodipine 5mg

Vitals: BP 138/88, HR 92, SpO2 94% on room air

Overall Impression

No acute cardiopulmonary process identified. Mild cardiomegaly is present.

Validated Findings (Grounded)

Finding 1: No acute cardiopulmonary process identified

Image Region : entire chest

Evidence : No visible signs of acute infiltrates, pneumothorax, or pleural effusion

Confidence : 0.90

Finding 2: Mild cardiomegaly

Image Region : cardiac silhouette

Evidence : Cardiac silhouette appears slightly enlarged relative to thoracic cavity

Confidence : 0.80

Refused Claims (Insufficient Evidence)

- REFUSED: Presence of pleural effusion

Reason: No blunting of costophrenic angles or fluid levels observed

- REFUSED: Acute pulmonary infiltrates

Reason: No areas of increased opacity or consolidation visible

Limitations & Uncertainties

Cannot determine subtle interstitial changes or small nodules due to image resolution.

Evaluation Scores

Factuality Score: 0.000

Grounding Score: 1.000

Avg Confidence: 0.850

Hallucination Rate: 0.500

Refusal Rate: 0.500

Clinical Reliability: 0.400

Total Claims Attempted: 4

Validated Findings: 2

Refused Claims: 2
